## [www.tuev-sued.de/netinform](http://www.tuev-sued.de/netinform) Pressure Equipment Module

Manufacturers, designers and operators now face increasing challenges with respect to the implementation of national and international requirements pertaining to pressure-equipment production and operation: what national or international requirements must be satisfied and how can they be implemented in practice? Where can I find competent support and who are the right partners when it comes to design, execution, maintenance and inspection?

### Guide through all relevant regulations

netinform points the way to key information and provides all tools for cost-effective implementation of relevant regulations, codes and standards. The module addresses all important target groups, viz. manufacturers of plants and plant components, planners and designers and also operators.

The *Guide* leads through the regulatory jungle and informs in keywords about the most important requirements and their implementation. For more in-depth information, tools and original texts can be accessed via links and information about recognized and current codes and standards of different countries called up with a mouse click.

The *Research* category leads to the *Virtual Exhibition*, netinform's platform for company presentation, which assists customers from industry in selecting appropriate product and service suppliers. A regional search function allows specific filtering for companies in your direct vicinity. A comprehensive standard service, including regulations and law texts and a collection of aids and tools, including technical articles, forms, computation programs and decision-making tools, are also available. Additionally, EC type-Examinations for pressure equipment certified by TÜV SÜD may be viewed.

Under *Expert advices*, damage cases are presented, error sources pointed out and possible solutions suggested.
