Validation, Verification and Certification of CDM and JI Projects

A Product Information Sheet by the Environmental Engineering Business Unit

The project-based mechanisms JI (Joint Implementation) and CDM (Clean Development Mechanism) form part of the Kyoto Protocol and open investors, export-oriented plant engineering companies and project developers promising market opportunities.

Relevant areas are for example:

- Renewable energies
- Energy efficiency
- Energy saving
- Landfill gas
- Land use and forestry

Expert and independent support are needed for profitable participation in emissions trading and successful implementation of climate change and carbon offset projects.

Our services

TÜV SÜD and its Carbon Management Services unit have been assessing climate change and carbon offset projects since 2000. Having assessed hundreds of projects, TÜV SÜD is one of the market leaders in third-party validation and verification of climate change measures. Regarding validation and verification of CDM and JI projects, we have been accredited for all fields of technology by UNFCCC. For more information of our current accreditation status visit: www.unfccc.int.

Our experts assist you in the successful implementation of climate change and carbon offset projects, offering services including:

- Submission of new methodologies to the CDM Executive Board for approval
- Validation of CDM and JI projects prior to project kick off as a key step in the project cycle
- Verification and certification of CDM and JI projects during the project term

Your benefits

- ▶ You save time by accessing an international team of experts
- ▶ You gain investment security utilising our reputation with UN authorities
- ▶ You gain planning certainty in project realisation
- ▶ You generate tradable certificates based on reliable validation and verification reports

Cooperation with TÜV SÜD ensures your success in climate change project implementation.

Call us! We will be happy to offer expert advice.

We have global representation.
