Air-Pollution Forecasts

A Product Information Sheet by the Environmental Services Business Unit

What are air-pollution forecasts?

Air-pollution forecasts inform about future pollutant emissions of a plant, such as

- air pollutants
- odors
- noise and vibrations.

Air-pollution forecasts allow statements on emissions dispersions to be made, taking geographical and climatic features into account.

What are air-pollution forecasts needed for?

Air-pollution forecasts are required within the scope of plant design, operation or modification and prepared with the aid of simulation calculations.

Our services

We address these questions in line with statutory requirements such as

- TA Luft
(Technical Instructions on Air-Quality Control)
- Geruchsimmissions-Richtlinie, GIRL
(Directive on Odor in Ambient Air)
- TA Lärm (Technical Instructions on Noise)
- Störfallverordnung, Störfall-VO
(Hazardous Incident Ordinance)
- Environmental monitoring at existing airports including pollutant measurement (bioindication, soil ecology)

Your benefits

- ▶ Objective evaluation
- ▶ Acceptance by authorities and the general public
- ▶ Legal security and accelerated procedures
