In-House Workshop – Fit for Emissions Trading

A Product Information Sheet by the Environmental Services Business Unit

Why an In-House Workshop?

This in-house workshop informs you and your employees about current trends in emissions trading and its related subjects of climate-change policy and climate-change projects.

The interactive workshop approach maps out your specific corporate situation, identifying individual starting points for more in-depth consultancy if required. You will also be issued with a tangible, customised result in the form of a „to-do list“.

In contrast to a more broadly based seminar, the all-day workshop offers up to 8 employees the most effective form of interactively addressing the above subjects.

Subjects

- CO₂ emissions trading and its strategic and operating challenges for energy-sector organisations
- UNFCCC and the Kyoto Protocol: status quo
- EU Emissions Trading Scheme: status quo, allocation, early actions

- Project-based mechanisms: integration of JI, CDM and domestic projects into EU trading
- Interface between emissions trading and other fields of politics, e.g. CHP (combined heat and power production)
- Strategic aspects
- Corporate emissions profile
- Technical preparations: processes, responsibilities, established management systems
- Summarising of results and preparation of a to-do list

Your benefits

- ▶ Timely preparation for EU Emissions Trading
- ▶ Efficient training of the responsible employees
- ▶ Assessment of entrepreneurial risks involved in emissions trading
- ▶ Identification of useful potentials (energy management, document and data handling)
- ▶ Identification of ideal solution strategy

We have international representation.
