Pollutant and Past Pollution Surveys in Buildings

A Product Information Sheet by the Environmental Services Business Unit

It must be assumed that sources of pollution are to be found in many older buildings. Consequently, prior to any modification and renovation work, planners and builder owners should survey a structure to ascertain whether and, if yes, which types of pollutants or past pollution are present in the building fabric.

If pollutants or contaminants are detected, technical planners for problem sites can incorporate the necessary measures in overall planning. The costs incurred for dismantling and disposal and the occupational health and safety measures to be taken are thus known in advance, making it possible to avoid delays and additional costs while work is already underway.

Expert and residue-free removal of pollutants and contaminants is important, particularly if the building is continued to be used. After all, only the expert removal of pollutants and contaminants can ensure that indoor pollutant levels will be clearly reduced after completion of remediation measures. In contrast, work performed improperly may even cause pollution levels to rise.

Our services

TÜV SÜD Industrie Service GmbH has many years of hands-on experience in environmental engineering and offers a comprehensive range of services. Our authorised specialists offer expert and cost-effective assistance and support you with state-of-the-art know-how in every area. Pollutant and past pollution surveys in buildings cover the following services:

- Building inspection and investigation of potential sources of pollution
- Material sampling and analysis
- Preparation of pollution removal strategies
- Technical support and verification of the success of restoration and redevelopment measures.

Your benefits

- ▶ Planning certainty
- ▶ Avoidance of unexpected follow-up costs
- ▶ Increase in building value due to „absence of past pollution“

The wide public awareness and excellent international reputation of the TÜV SÜD brand ensure that our reports and certificates meet with a high level of acceptance.

Interested in learning more about our services? Call us! We will be pleased to explain possible forms of cooperation or submit a quotation with no obligation on your part.
