License/Permit Management

A Product Information Sheet by the Environmental Services Business Unit

What is license/permit management?

License/permit management combines all services required to obtain a license/permit according to environmental-protection legislation, such as

- Procedures for obtaining a license/permit
- Environmental impact assessments (EIA/EIS)
- Expert reports on approvals as per the Air Pollution Control Act (noise, air-pollution and odor forecasts).

A project team offers ongoing support during realisation of your project – from start to completion.

When is license/permit management in demand?

Construction of a new technical plant and modification or extension of existing plants generally involve clearance in the form of licensing or permit procedures. Without professional assistance, this may prove a costly, time-consuming and troublesome business! Scheduled production targets and commissioning dates may be jeopardized, resulting in major business damage.

We advise you on all regulations and laws from the design stage and/or in the runup to planning and, if necessary, review your project for feasibility. In the interests of rapid project realisation, full use is made of all possibilities offered by environmental legislation (Air Pollution Control Act, EIA Act, etc), such as application to start ahead of schedule or partial licenses.

Our Services

- Consultancy on all questions related to licenses/permits and environmental law
- Coordination of the required procedure and application scope with the competent authorities
- Preparation, conduct and evaluation of all coordination meetings and appointments at authorities
- Organization and realization of mediation and conflict management procedures
- Preparation or compilation of application documentation and the required expert reports including review for plausibility and completeness
- Following issue of the license/permit, review and evaluation of licensing/permit requirements and assistance in meeting them
- Project control for comprehensive licensing procedures
