

Identify potential savings with energy consultancy for buildings.

Until a few years ago, energy consumption of buildings was hardly even considered. That has changed.

Scarcity of fossil fuels, increasing energy costs and the increasing importance of environmental protection place increasing demands on the efficient use of energy. Correspondingly international laws and directives have been made more stringent.

Sustainable buildings, so-called Green Buildings are energy-saving and are becoming increasingly attractive for investors and users.

TÜV SÜD experts have been active in this field for many years, not only in energy consultancy for industrial companies, but also

in on-site energy consultancy for local buildings, residential properties, commercial, special and management real estate.

The basis of our energy consultancy for buildings is the sound and reliable evaluation of the present state of the building.

Along-side the structural thermal insulation, we especially focus on heating, lighting and air conditioning installed. As it is often in these areas where there is enormous potential for optimising energy consumption.

Profit from our extensive experience and interdisciplinary working method. Talk to us.

Industrie Service

www.tuev-sued.com/is

Reduce energy costs. Improve return on capital.

TÜV SÜD services

- On-site analysis of the building with structural and energetic calculations
- Evaluation of the structural state and the technology installed
- Uncover existing weak spots
- Evaluation of energy loss
- Development of measures for improving structural thermal insulation and technology
- Determination of technical and cost-effective options / modifications considering local legal requirements
- Examination of alternative heating strategies, i.e. integration of solar plant, combined heat and power systems
- Calculation of the derived reduction in emissions

Your benefits

- ▶ An objective evaluation of all relevant structural and building technical aspects
- ▶ An indispensable base for planning your investment
- ▶ Useful and cost-effective recommendations for renovation work to be carried out
- ▶ Cost-effective operation of your plant
- ▶ Impartial and expert advice
- ▶ Internationally recognised partner with an excellent reputation: TÜV SÜD.

Please call us. We will be happy to advise you or send you a customised quote. We operate internationally.
