

Energy Schemes for Municipalities and Regions

Industrie Service

**Choose certainty.
Add value.**

Invest for the future with sustainable energy schemes for municipalities and regions.

The demands on municipalities and regions regarding environmental planning are complex. Topics such as energy efficiency and sustainability are becoming increasingly important for the general public. Increasing severity of environmental laws and increasing costs are forcing us to be more economical with energy.

The top priority is to transform the regions nearly into CO₂ free metropolitan areas. To achieve this we need to pay more attention to the development of urban infrastructure such as town, building, traffic and energy planning. Creating energy concepts has proved to be a solid basis for the decision making process and sets the course for a sustainable energy policy.

TÜV SÜD experts have been advising companies, municipalities and regions for many years on investment decisions and have extensive expertise with plant and supply engineering.

As a neutral, third-party entity we create your individual energy concept for you. Together we discuss energy policy and suggest ways to improve energy efficiency. We develop alternative supply concepts taking the economic boundaries into consideration, and present measures to reduce emissions.

Please call us. We will be pleased to provide you with more detailed information. We operate internationally.

TÜV SÜD. Choose certainty. Add value.

TÜV SÜD Industrie Service GmbH

TÜV®

Industrie Service

www.tuev-sued.com/is

Make your decisions based on solid facts.

TÜV SÜD services

- Evaluate energy supply and consumption of plants and buildings
- Create measures to increase energy efficiency taking economic boundaries into account
- Create heating and emission cadastres as a base for making decisions about the planning of energy infrastructure
- Create project and feasibility studies for using innovative supply technology (solar energy, biomass heating plant, CHP, fuel cells etc.)
- Create concepts for building or retrofitting energy supply plants
- Show possible ways to reduce emissions

Your benefits

- ▶ Ensure an efficient use of energy resources and support sustainable energy policy.
- ▶ Support the local/regional independence of energy supply and reduce energy supply costs.
- ▶ Secure long-term investments by supplying environmentally-friendly energy.
- ▶ Support the local economy.
- ▶ Improve the appeal of your region and provide a higher quality of life.
- ▶ Make a positive contribution to environmental protection creating good PR.

Rely on a partner who offers you impartial, objective advice, experience and expertise: TÜV SÜD.
